AIDEN P. SWANSON

801.971.1178 | aidenpswanson@gmail.com | linkedin.com/in/aiden-swanson | github.com/Cassequel | aidenswanson.com

EDUCATION

M.S. Information Systems: Machine Learning Emphasis | Brigham Young University
Marriott School of Business *Expected Apr 2028*
GPA: 3.85 • Dean's List

TECHNICAL SKILLS

ML & AI: scikit-learn, supervised learning, model evaluation, cross-validation; PyTorch, Ollama, n8n
Languages: Python, SQL, JavaScript (ES6+), TypeScript, C#
Data & Visualization: Pandas, NumPy, exploratory data analysis, Tableau, Power BI
Infrastructure: Git, GitHub, AWS (EC2, RDS), Linux, Docker
Development: React, Next.js, Node.js, REST APIs, PostgreSQL, MySQL

PROJECTS

Self-Directed Machine Learning & Language Models *Sep 2026–Present*
Independent Project

- Studying neural networks independently in PyTorch, working through model architecture, training loops, loss functions, backpropagation, and optimization.
- Implemented training with cross-entropy loss, backpropagation, and SGD; evaluated loss on held-out text and generated characters autoregressively using greedy decoding.

Full-Stack Data Pipeline & Application for Non-Profit | BYU Core Competition *Apr 2026*

- Built a data pipeline for a nonprofit client to analyze donor retention, resident reintegration, safehouse program effectiveness, and social media engagement.
- Developed predictive models for inactive donor identification and program outcomes; integrated data with Supabase for real-time reporting and presented findings to industry judges.

SOC-2 Compliance Tracker | Sandbox Accelerator, BYU *Feb 2026*

- Co-built a TypeScript/Next.js platform to track control evidence, compliance status, and audit readiness.
- Selected for BYU's competitive tech startup accelerator based on this project.

Python ML & Data Analysis Projects | BYU Coursework / External *2024–Present*

- Applied multiple linear regression, decision trees, and classification to real estate pricing, credit default risk, and sports datasets; evaluated models using RMSE, R^2, and cross-validation.

EXPERIENCE

OpenAI Campus Lead | OpenAI Student Collective, BYU *Sep 2026–Present*

- Co-organizing the first OpenAI Student Collective event at BYU to help students explore AI tools and build a campus learning community.

AI Curriculum Intern | Leland, Lehi, UT *May–Aug 2026*

- Co-developed an AI Builder Program curriculum with a 7-person team and trained instructors to teach AI fundamentals, agent workflows, and orchestration.
- Authored lessons covering Claude, ChatGPT, Hermes, VPS and cloud agent deployment, n8n, and shared knowledge bases; the program reached thousands of learners and earned a 4.8 rating across 536 reviews.
- Served as a teaching assistant, delivering AI curriculum directly to instructors and learners.

Data Research Assistant | Marriott School of Business, BYU, Provo, UT *Oct 2024–Jul 2025*

- Built Python pipelines with Pandas and NumPy to clean, transform, and model large behavioral datasets.
- Automated data processing workflows and created statistical visualizations for faculty research.
- Selected for a competitive research fellowship based on an original paper on quantum computing.

Agent Team Member | Kim Jasperson State Farm, Provo, UT *Aug 2025–May 2026*

- Managed client data and multi-state insurance portfolios in Salesforce CRM at a top 15-ranked agency.
